

Specific Information Document	
Investment Strategy:	Risk Level 6 Investment Strategy
Insurance Company:	Octium Life DAC
Date of creation of the SID:	16 February 2022

Purpose

This Specific Information Document (SID) should be read alongside the Key Information Document (KID) for your product provided to you by your intermediary (and available on our website www.octiumgroup.com). This SID is not marketing material and provides you with specific information about this investment strategy. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this investment strategy and to enable you to compare it with other investment strategies.

You are about to purchase an investment strategy that is not simple and may be difficult to understand.

What is this investment strategy?

Type

The Risk Level 6 investment strategy is characterised by the objective, risk class and allocation limits described below and it represents all the investment strategies available for subscription, with the same objective, risk class and allocation limits.

Objectives

This investment strategy aims to increase the value of the invested capital within the recommended investment horizon specified below, while maintaining a high risk appetite under normal market and economic conditions.

This investment strategy provides for investments in cash or similar instruments (usually referred to as money market instruments) in local or foreign currency, bond investments in local and foreign currency, issued directly by European or international companies or bodies or indirectly through UCITS funds and/or UCIs, investments in equity market instruments and alternative investments (such as alternative investment funds, derivatives, structured securities or accounts/commodities) and it aims to maintain the volatility at a high level. Depending on the market situation, the effective volatility may be higher than the expected volatility.

Under normal circumstances the objective shall be achieved almost entirely from dividends and capital gains. Returns from interest could represent a minimal part of returns generated by this investment strategy.

The return (the profit or loss derived from investing) of this investment strategy depends on the performance of the securities in which it invests, which are in turn influenced by the positive or negative performance of the financial markets, by the fluctuations in interest rates, by the foreign exchange rate fluctuations and by any other economic factor. There is no guarantee of minimum return or repayment of the invested capital.

Intended Investor

This investment strategy is intended for investors with a high appetite for risk and whose objective is to maximise asset growth.

At the time of investment, the investor must be tax resident in the country where the product is offered, and should have knowledge of, and experience in, insurance-based investment products and financial markets and must be able to evaluate the investment strategy, characteristics and risks associated with the investment strategy.

What are the risks and what is the potential return?

Summary risk indicator

The risk indicator assumes that you keep this investment strategy for 10 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less.

You may not be able to end the investment strategy easily or you may have to end at a price that significantly impacts on how much you get back.

The summary risk indicator is a guide to the level of risk of this investment strategy compared to other investment strategies. It shows how likely it is that the investment strategy will lose money because of movements in the market or because we are not able to pay you.

We have classified this investment strategy 6 out of 7, which is the second highest risk class.

This rates the potential losses from future performance at a high level, and poor market conditions are very likely to impact our capacity to pay you.

Performance Scenarios

Investment: €10,000		1 year	5 years	10 years (recommended holding period)
Scenarios				
Stress Scenario	What you might get back after costs	11.32 to 1,179.31	12.22 to 1,873.15	0.19 to 765.57
	<i>Average return each year</i>	-99.89% to -88.21%	-73.85% to -28.47%	-66.31% to -22.66%
Unfavourable Scenario	What you might get back after costs	2,495.34 to 6,985.46	209.41 to 4,706.82	18.02 to 3,640.84
	<i>Average return each year</i>	-75.05% to -30.15%	-53.85% to -13.99%	-46.84% to -9.61%
Moderate Scenario	What you might get back after costs	6,782.85 to 10,149.36	2,018.64 to 10,967.88	448.26 to 12,084.46
	<i>Average return each year</i>	-32.17% to 1.49%	-27.39% to 1.86%	-26.69% to 1.91%
Favourable Scenario	What you might get back after costs	13,478.29 to 19,251.97	16,680.80 to 25,943.41	9,559.25 to 40,715.81
	<i>Average return each year</i>	34.78% to 92.52%	10.78% to 21.01%	-0.45% to 15.07%

This table shows the money you could get back over the next 10 years, under different scenarios, assuming you invest 10,000 EUR.

The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other investment strategies. The scenarios presented are an estimate of the future performance based on evidence from the past on how the value of this investment varies and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the investment.

The stress scenario shows what you might get back in extreme market circumstances and it does not take into account the situation where we are not able to pay you.

The figures shown include all costs of the investment strategy itself. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the investment return you might get. The total costs take into account one-off, ongoing and incidental costs.

Investment: €10,000			
Scenarios	If you cash in after 1 year	If you cash in after 5 years	If you cash in after 10 years
Total Costs	0.00 to 808.61	0.00 to 639.03	0.00 to 662.97
Impact on return (RIY) per year	0.00% to 11.26%	0.00% to 5.50%	0.00% to 4.68%

The amounts shown here are the cumulative costs of the investment strategy for three different holding periods. They include potential early exit penalties. The figures assume that you invest 10,000 EUR. The figures are estimates and may change in the future.

Costs over time

The intermediary selling you or advising you about this investment strategy may charge you other costs. If so, this person will provide you with information about these costs and show you the impact that all costs will have on your investment over time.

Composition of costs

The table below shows:

- the impact each year of the different types of costs on the investment return you might get at the end of the recommended holding period.
- the meaning of the different cost categories.

This table shows the impact on return per year			
One-off costs	Entry costs	0.00% - 6.00%	The impact of the costs you pay when entering your investment.
	Exit Costs	0.00% - 1.01%	The impact of the costs of exiting your investment. At underlying investment level, exit costs may apply.
Ongoing costs	Portfolio transaction costs	0.00% - 0.00%	The impact of the costs of us buying and selling underlying investments for the product.
	Other ongoing costs	0.00% - 4.06%	The impact of the costs that we take each year for managing your investments.
Incidental costs	Performance fees	0.00% - 30.00%	The impact of the performance fee. We take these from your investment if the performance of the investment strategy is linked to a benchmark and it outperforms this benchmark.
	Carried interests	-	Not applicable

This table shows the impact on the performance per year based on the assumption of a ten-year holding period and an investment of 10,000 EUR. However, the minimum investment in this investment strategy is higher. For information on the minimum amount that can be invested in a strategy, please refer to your intermediary.

Disclaimer:

The costs represented in above tables might be higher than the actual costs of the chosen investment option if this SID is associated by default, as required by the PRIIPS regulation, to an investment option for which at least 2 years of historical returns are not available.
